

THE MATCHING bracelet length

Determine your size

1. THOMAS SABO also shows the inner circumference in centimeter in the size selection field on every bracelet detail page. For example: L15 (15.00 cm); L19v (14.00 - 19.00 cm). This inner circumference corresponds to the circumference of your wrist.

2.

You can easily determine your own bracelet size with a measuring tape or a cord. To measure simply place the cord (or the measuring tape) around your wrist. The ends of the cord should be marked.

3. By using a ruler you can then measure the marked cord and get your wrist size.

Select the right Karma bracelet size

The THOMAS SABO Karma bracelets can be worn **with a different number of beads** and /or small pendants. Whether you wear **only a single bead or a fully stocked bracelet** – you always create a personal piece of jewellery.

HINT: Each Karma bracelet should always be **worn with at least one stopper**, which ensures that the beads are held securely on the bracelet and cannot be lost.
