

## QUESTIONS ABOUT EAR PIERCING? WE HAVE THE ANSWERS.

### From what age is ear piercing allowed?

There is no minimum age for ear piercing. The decision to pierce children's ears is at the discretion of parents or guardians. However, we recommend waiting until at least the child's 4th birthday. Parents/guardians must provide written consent in the case of minors. For children under 16, they must be present when the ears are pierced.

### Does ear piercing hurt?

THOMAS SABO uses brand-name equipment that pierces ears almost painlessly within a few seconds. At most, you feel a brief pinch.

### How do I properly care for new ear piercings?

Your THOMAS SABO sales associate will give you care instructions after piercing your ears, explaining everything in detail. In order for the healing process to proceed optimally, we ask you to follow the instructions. After your ears have been pierced, pay particular attention to regular care - at least twice a day. Wear the initial studs for at least 6 weeks without taking them out.

## TIME FOR EARRINGS!

You can book an appointment for ear piercing in your preferred THOMAS SABO store. However, this is usually only necessary during busy periods around holidays and recommended when you wish to have a child's ears pierced. This means you won't have to wait in the store and our THOMAS SABO sales associates can set enough time aside for your appointment in advance.

*We look forward to seeing you!*

EAR PIERCING WITH

*Thomas Sabo*

powered by  
**STUDX**

Example: for THOMAS SABO ear studs as follow-up jeweller

## IN THE BEST HANDS

### Leading global brand

THOMAS SABO has partnered with STUDEX, the global piercing leader and largest manufacturer of ear piercing. Over 100 million ear piercings have been performed using STUDEX precision instruments worldwide, a sign of trust and quality.

### Trained specialists

Only trained sales associates who have completed the required training programme are authorised to pierce ears at THOMAS SABO.

## WHICH PARTS OF THE EAR CAN BE PIERCED?

THOMAS SABO offers piercings on the ear lobe. We offer multiple lobe piercings, combinations such as two to three ear studs on the earlobe for example. A THOMAS SABO sales associate will be happy to help you create your individual earring look, ready for when you can remove the medical grade ear studs.

## HOW DOES THOMAS SABO PIERCE THE EARS?

### In a fast, gentle and hardly perceptible way

The STUDEX system used by THOMAS SABO is very gentle thanks to its patented technology and thin stud pins.

### Especially quiet at the ear

The handling of this system is almost noiseless, so that even children are not frightened.

### Sterile application

Thanks to the use of sterile cartridges, THOMAS SABO sales associates do not touch the ear stud or the clasp during the piercing process. The device itself never comes into direct contact with the ear either.

### Optimal healing

The automatically correct positioning of the stopper on the stud allows enough air to reach the pierced hole and, like the narrow piercing channel, contributes to optimal healing.

### Hypoallergenic earrings

For ear piercing, we do not use THOMAS SABO ear jewellery but special, medical ear studs from STUDEX made of surgical steel and real gold. They comply with the EU REACH Regulation. They are hypoallergenic and skin-friendly and therefore ideally suited to preventing allergic reactions.

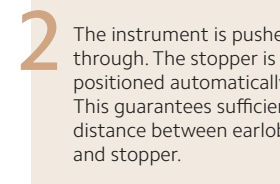

### Stylish ear jewellery after the healing phase

After the healing phase with the medical ear studs, you can finally select your favourite earrings from THOMAS SABO. Whether discreet studs or eye-catching drop earrings - THOMAS SABO offers you a wide selection of high quality and handcrafted jewellery made from 925 Sterling silver.

## EAR PIERCING WITH THOMAS SABO: THIS IS HOW IT WORKS

- 1 The earlobes are cleaned thoroughly from both sides with the alcohol swab. The alcohol cleaner should act for 30 seconds and dry.

- 2 The instrument is pushed through. The stopper is positioned automatically. This guarantees sufficient distance between earlobe and stopper.

- 3 Pressure is triggered by the instrument, which is then carefully pulled down and removed.

- 4 The THOMAS SABO sales associate will be pleased to advise you on the correct care of your new ear piercings. From 24 hours after ear piercing, you should regularly apply a care product twice a day.
